OR

The computer can workout calculations and provide answers to complicated problems in a flash. A man would take days or even months to workout the same thing. But it can not do things on its own. All the information it needs to do something is to be fed into it. This information is called data. The computer also has a memory. It can store information and use it later. It can therefore, be compared to the human brain. But can solve problems much faster and more accurately than the human brain. It can be made to play games like chess and can translate words from one language to another. But it can not take decisions or think up new ideas. That is where it can not compete with the human brain.
